# **Module 2 Cheat Sheet - Introduction to Linux Commands**

# **Getting information**

1. 1

Return your user name:
1. 1
1. whoami
Copied!
Return your user and group id:
1. 1
1. id
Copied!
Return operating system name, username, and other info:
1. 1
1. uname -a
Copied!
Display reference manual for a command:
1. 1
1. man top
Copied!
List available man pages, including a brief description for each command:
1. 1
1. man -k .
Copied!
Get help on any command (for eg: curl):
1. 1
1. curlhelp
Copied!
This provides a brief overview of the curl command's usage and options.
Return the current date and time:
1. 1
1. date
Copied!
Navigating and working with directories
List files and directories by date, newest to last:
1. 1
1. ls -lrt
Copied!
Find files in directory tree that end in .sh:
1. 1
1. find -name \'\*.sh\'
Copied!
Return path to present working directory:

about:blank 1/6

about:blank

_	
	Caniadi
	Coplea!

Make a new directory:

- 1. 1
- mkdir new\_folder

Copied!

Change the current directory:

Up one level:

- 1. 1
- 1. cd ../

Copied!

To home:

- 1. 1
- 1. cd ~` or `cd

Copied!

To some other directory: cd path\_to\_directory

Remove directory verbosely:

- 1. 1
- 1. rmdir temp\_directory -v

Copied!

# Monitoring system performance and status

List selection of/all running processes and their PIDs:

- 1. 1
- 1. ps

Copied!

- 1. 1
- 1. ps -e

Copied!

Display resource usage:

- 1. 1
- 1. top

Copied!

List mounted file systems and usage:

- 1. 1
- 1. df

Copied!

# Creating, copying, moving, and deleting files:

Create an empty file or update existing file's timestamp:

- 1. :
- touch a\_new\_file.txt

Copied!

Copy a file:

- 1. 1
- cp file.txt new\_path/new\_name.txt

Copied!

Change file name or path:

16/10/2024 00:20 about:blank

- 1. 1
- 1. mv this\_file.txt that\_path/that\_file.txt

Copied!

Remove a file verbosely:

- 1. 1
- 1. rm this\_old\_file.txt -v

Copied!

# Working with file permissions

Change/modify file permissions to 'execute' for all users:

- 1. 1
- 1. chmod +x my\_script.sh

Copied!

Change/modify file permissions to 'execute' only for you, the current user:

- chmod u+x my\_file.txt

Copied!

Remove 'read' permissions from group and other users:

- 1. chmod go-r

Copied!

# Displaying file and string contents

Display file contents:

- 1. 1
- cat my\_shell\_script.sh

Copied!

Display file contents page-by-page:

- 1. more ReadMe.txt

Copied!

Display first 10 lines of file:

- 1. 1
- 1. head -10 data\_table.csv

Copied!

Display last 10 lines of file:

- 1. tail -10 data\_table.csv

Copied!

Display string or variable value:

- echo "I am not a robot"
  echo "I am \$USERNAME"

Copied!

# **Basic text wrangling**

Sorting lines and dropping duplicates:

16/10/2024 00:20 about:blank

Sort and display lines of file alphanumerically:

```
1. 1
```

sort text\_file.txt

```
Copied!
```

In reverse order:

```
1. 1
```

```
 sort -r text_file.txt
```

Copied!

Drop consecutive duplicated lines and display result:

```
1. 1
```

```
 uniq list_with_duplicated_lines.txt
```

Copied!

#### Displaying basic stats:

Display the count of lines, words, or characters in a file:

#### Lines:

1. 1

Copied!

#### Words:

1. 1

Copied!

#### **Characters:**

1. 1

Copied!

#### Extracting lines of text containing a pattern:

Some frequently used options for grep:

# Option

# Description

- -n Print line numbers along with matching lines
- -c Get the count of matching lines
- -i Ignore the case of the text while matching
- -v Print all lines which do not contain the pattern
- -w Match only if the pattern matches whole words

Extract lines containing the word "hello", case insensitive and whole words only:

```
1. 1
```

Copied!

 $\textbf{Extract lines containing the pattern "hello" from all files in the current directory ending in . \texttt{txt:} \\$ 

```
1. 1
```

Copied!

### Merge two or more files line-by-line, aligned as columns:

Suppose you have three files containing the first and last names of your customers, plus their phone numbers.

Use paste to align file contents into a Tab-delimited table, one row for each customer:

- 1.
- 1. paste first\_name.txt last\_name.text phone\_number.txt

16/10/2024 00:20 about:blank

```
Copied!
```

Use a comma as a delimiter instead of the default Tab delimiter:

```
1. paste -d "," first_name.txt last_name.text phone_number.txt
```

```
Copied!
```

#### Use the cut command to extract a column from a table-like file:

Suppose you have a text file whos rows consist of first and last names of customers, delimited by a comma.

Extract first names, line-by-line:

```
1. cut -d "." -f 1 names.csv
```

Extract the second to fifth characters (bytes) from each line of a file:

```
 cut -b 2-5 my_text_file.txt
```

Copied!

Extract the characters (bytes) from each line of a file, starting from the 10th byte to the end of the line:

```
1. cut -b 10- my_text_file.txt
```

Copied!

### Compression and archiving

Archive a set of files:

```
1. 1
```

```
1. tar -cvf my_archive.tar.gz file1 file2 file3
```

Copied!

Compress a set of files:

```
 zip my_zipped_files.zip file1 file2
 zip my_zipped_folders.zip directory1 directory2
```

Copied!

Extract files from a compressed zip archive:

```
 unzip my_zipped_file.zip
 unzip my_zipped_file.zip -d extract_to_this_direcory
```

Copied!

### Working with networking commands

Print hostname:

- 1. 1
- 1. hostname

Copied!

Send packets to URL and print response:

- 1. 1
- 1. ping www.google.com

Copied!

Display or configure system network interfaces:

16/10/2024 00:20 about:blank

- 1. 1 2. 2
- ifconfig
  ip

Display contents of file at a URL:

- 1. curl <url>

Download file from a URL:

- 1. 1
- 1. wget <url>
