Code Example

```python
1  from pyspark.sql import SparkSession
2  spark = SparkSession.builder.appName("MyApp").getOrCreate()
```

```python
1  from pyspark.sql import SparkSession
2  spark = SparkSession.builder.appName("MyApp").getOrCreate()
3  data = [("Jhon", 30), ("Peter", 25), ("Bob", 35)]
4  columns = ["name", "age"]
```

Creating a DataFrame

```python
1  df = spark.createDataFrame(data, columns)
```

```python
1  df.createOrReplaceTempView("cust_tbl")
```

Replace NULL/None values in a DataFrame

```python
1  filled_df = df.fillna(0)
```

Replace with zero

```python
1  filtered_df = df.filter(df['age'] > 30)
```

```python
1  spark = SparkSession.builder.getOrCreate()
```
